-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 56, 57, 61, 62, 64, 65 and 67-72 are rejected under 35 U.S.C. 102(b) as being anticipated by Bynum U.S. Pat. No. 5,586,790.

Bynum discloses an elongated body, having a first section and a second section with a lumen through both sections (fig. 14), a proximal end portion of the second section having a tapering outer shape (fig. 14), and at least one radially extending member disposed on the first section of the elongated body and having at least one contact surface (156), a spin nut comprising a generally tubular body (142) and rotatably disposed on the first section of the elongated body (fig. 13); a screw thread formed on an inner surface of the spin nut (fig. 13) and a receptacle disposed distally upon the spin nut (146), the receptacle having at least one contact surface disposed within the receptacle (fig. 13), the at least one contact surface configured and arranged to interact with the at least one contact surface of the radially extending member (fig. 13) when the receptacle receives at least a portion of the radially extending member so as to transfer both axial and rotational forces between the spin nut and the connector fitting while limiting distal longitudinal movement of the spin nut relative to the elongate body (note: The device of Bynum is fully capable of performing the function; wherein the

spin nut and the elongate body include cooperative structures that limit proximal longitudinal movement of the spin nut relative to the elongate body (fig. 13); as to claim 57, (150); as to claims 61, 62, 64, 65, 67, 68, 69, (see above rejections); as to claims 70, and 72, (fig. 13); as to claim 71, the device of Bynum is fully capable of performing the function as set forth in the claim.

### ***Allowable Subject Matter***

Claims 58-60, 63 and 66 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 51-55 are allowable over the prior art of record.
